

## Rear Light Requirement

Select limited classes must run a rear facing green light to help identify slower paced vehicles when coming through their dust. For the classes that require the green light (listed below) the rear facing amber light will be optional, you will not be required to remove it. \*\*

The blue light is illegal in the state of California and cannot be used at open course off road events. Because of this law we will be requiring race vehicles with blue lights to disable them before they can start the race. This created a safety issue making slower paced race vehicles much harder to identify through a dust plume. An alternative was needed.

Green lights can be seen through a dust plume at a range far exceeding any other color available. This option can be purchased at GG Lighting, Sierra LED, Rearlightbar.com, and Baja Designs.

Any rear facing green light with a minimum of 4 square inches of surface area will be permitted. The light must be clearly visible from the rear of the car with no obstructions. There will be no brand or lumen requirement, however, don't be surprised if you don't pass tech with a dim light or green duct tape over your amber. This green light is for your safety, the brighter the better.

Rear facing green light required for classes: 9,11,1900 (UTV), 1300, 2000 & 5/1600

Rear facing green light optional for classes: 12, 1350, 1400,1600 & 3000

\*\*SNORE will be accepting the green light as a legal alternative to their blue light requirement.
